Job Overview

We are looking for an analytical, results-driven Back-End Developer who will work with team members to troubleshoot and improve current back-end applications and processes. The Back-End Developer will use his or her understanding of programming languages and tools to analyze current codes and industry developments, formulate more efficient processes, solve problems, and create a more seamless experience for users. You should have excellent communication, computer, and project management skills.

To succeed as a Back-End Developer, you should be focused on building a better, more efficient program and creating a better end-user experience. You should be knowledgeable, collaborative, and motivated.

Back End Developer Responsibilities:

- Compile and analyze data, processes and codes to troubleshoot problems and identify areas for improvement.
- Collaborating with the front-end developers and other team members to establish objectives and design more functional, cohesive codes to enhance the user experience.
- Developing ideas for new programs, products, or features by monitoring industry developments and trends.
- Recording data and reporting it to proper parties, such as clients or leadership.
- Participating in continuing education and training to remain current on best practices, learn new programming languages, and better assist other team members.
- Taking lead on projects, as needed.

Back End Developer Requirements:

- Bachelor's Degree in Computer Programming, Computer Science, or a related field.
- Fluency or understanding of specific languages, such as PHP or Python and operating systems may be required.
- Strong understanding of the web development cycle and programming techniques and tools.
- Excellent project and time management skills.
- Strong problem solving and verbal and written communication skills.
- Ability to work independently or with a group.
